You are about to purchase a product considered to be very complex and may be difficult to understand.

What is this product?

Type

A CFD on Equities (also referred to as CFD on Shares) is a leveraged contract entered into with **Squared Financial (CY) Limited** (the "Company") on a bilateral basis, settled in cash. It allows an investor to speculate on rising or falling prices of an underlying Share. An investor has the choice to buy (or go "long") the CFD to benefit from rising Share prices; or to sell (or go "short") the CFD to benefit from falling Share prices. The price of the CFD on a Share is derived from the price of the underlying Share, which may be either the current cash price of the future's price.

CFDs are leveraged products and leverage is customized and set by the client. At the end of the day any open positions are rolled over and changed a daily swap fee. Please note that margin trading requires extra caution because whilst you can realize large profits if the price moves in your favor, you risk extensive losses if the price moves against you. Failure to deposit additional funds in order to meet the maintenance margin requirement as a result of a negative price movement may result in the CFD being auto-closed. This will occur when your remaining account equity falls below the maintenance margin requirement.

Objectives

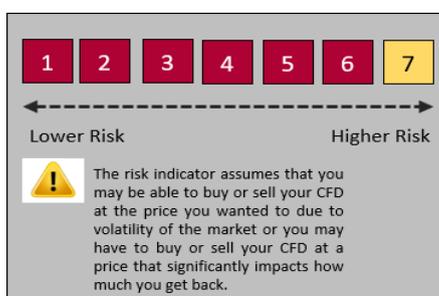

The objective of the CFD is to allow an investor to gain leveraged exposure to the price movement of the underlying Share (whether up or down) without owning it. The exposure is leveraged since the CFD only requires a small proportion of the notional value of the contract to be put down upfront as initial margin. The rate of return on the product investment depends on the opening price and the closing price of the position. The product reflects the changes of prices of the underlying instruments it is based on. The profit and risk profiles for this product are symmetric. Opening a transaction on the product, the investor makes a deposit, but can lose more than the deposited amount. There is no product maturity date. CFDs in general do not have a recommended holding period and it is down to the discretion of each individual investor to determine the most appropriate holding period based on their own individual trading strategy and objectives.

Intended Retail Investor

CFDs are intended for investor who have knowledge of, or are experience with, leveraged products and that understand how the prices of CFDs are derived, the key concepts of margin and leverage, the fact that losses may be of total invested amount and have the appropriate financial means to bear losses of the entire amount invested. CFDs are also intended for investors who can allow themselves to take a high risk and intend to use the product for short-term investment and/or speculative trading.

What are the risks and what could I get in return?

Risk Indicator

The Summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of the market movements.

We have classified this product as **7 out of 7**, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level.

The investor can lose the entire investment capital taken as the security deposits for opening a trade on the product item. There is no capital protection against market, credit or liquidity risk.

- **Be aware of Currency Risk:** It is possible to buy or sell CFDs on an Equity in a currency which is different to the base currency of your account. The final return you may get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.
- **Leverage Trading:** It magnifies the losses of price movements and failure to deposit additional funds may result in the CFD being auto-closed.
- **Force Closure Risk:** Investing in CFDs runs the risk of positions being force closed by the Company without the investor's consent, due to abrupt movements in the underlying financial instrument alongside the use of leverage (margin trading), in the event an investor's margin level reaches a pre-determined rate (for more information see 'Costs & Charges' section below).
- You are also subject to risks related to internet failures, communication failures and delays or account password theft.

This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section '[What happens if the Company is unable to pay you](#)'). The indicator shown above does not consider this protection.

There may be other risk factors with significant direct impact on the capital and return of investing in CFDs.

Performance Scenarios

The scenarios shown below illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the market performs and how long you hold the CFD. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you.

The following are scenarios for 4 Equity CFDs for long positions during a period of 1 year:

Table 1:

Scenario	AAPL.US	NVDA.US	BBVA.ES	BEI.DE
Favourable	929%	4,174%	556%	312%
	EUR 92,926	EUR 417,430	EUR 55,646	EUR 31,177
Moderate	540%	1,708%	153%	154%
	EUR 53,975	EUR 170,845	EUR 15,317	EUR 15,355
Unfavourable	232%	478%	-141%	24%
	EUR 23,200	EUR 47,832	EUR -14,145	EUR 2,424
Stress	-877%	-1,000%	-947%	-570%
	EUR -87,686*	EUR -99,968*	EUR -94,656*	EUR -57,013*

* The loss is restricted to your account balance as we offer Negative Balance Protection.

Market developments in the future cannot be accurately predicted. The scenarios shown are only an indication of some of the possible outcomes based on recent returns. Actual returns could be lower.

The scenarios presented are not an exact indicator of future performance, but an estimation to that effect. What You will get will vary depending on how the market performs and how long You keep the investment/product. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What happens if the Company is unable to pay out?

The Company is a member of the Investor Compensation Fund ("ICF" - private legal entity) which if the Company categorized You as a Retail Client and fails to return to Your funds owed in case of insolvency of the Company, you may direct to the ICF. ICF may compensate You for claims up to €20,000. If Your claim exceeds the €20,000 then You will be only entitled to receive a maximum of the equivalent of €20,000. Further information on ICF can be found in our ICF policy [here](#).

What are the Costs & Charges?

Pricing and other Related Information

Before you begin to trade CFDs on Indices, you should familiarise yourself with all one-off and recurring costs for which you will be liable. These charges will reduce any net profit or increase your losses. More information on these can be found on our website.

One Off Costs	
Spread	The difference between the bid and the ask price at the time of the conclusion of the transaction. The cost can be different depending on market conditions.
Commission	The fee to be charged at the opening and closing of the transaction.
Transactional Fee	The fee related to the conclusion of the transaction in selected Equity CFD instruments, connected with transactional fees on the underlying market.
Equivalent of Dividend	It is a cash reflection of the dividend paid to shareholders of a company whose shares are the underlying asset for the CFD. There is always a positive equivalent of dividend fee in case of equivalent of dividend for long positions and a negative in case of equivalent of dividend for short positions. This fee offsets the withholding tax levied on the dividend.
Recurring Costs	
Swap Rates	Holding positions for another day results in the charge of fee <i>The calculation for swaps is as follows: Swap = (one pip / exchange rate) * (trade size) * (swap value in points).</i>

How long should I hold it and can I take money out early?

CFDs are intended for short term trading, in some cases intraday and are generally not suitable for long-term investment. There is no recommended holding period and no cancellation period. You can open and close a CFD on Equities at any time during the market trading hours of each CFD.

How can I complain?

An Online Complaint Form is available at the Company's website, which shall be filled and submitted by You to the Company's Compliance department directly from the website. For more information please see our Complaints Procedure.
